## Other Considerations

### Dirt:

Handle the rotating union and/or hydraulic devices with extreme caution to ensure cleanliness. (ISO 4406, 17/15/12)

### Tools:

Use only appropriate tools.

### Transportation:

To avoid dirt contamination, the holes in the union must be completely protected/plugged before moving.

### Leakage:

If leakage occurs, verify that the leakage is not from the incorrect adjustment of other elements before dismantling the rotating union.

### Recommendation:

Hydraulic devices, including rotating unions, have a longer service life if they are not adjusted and handled frequently. Therefore, do not dismantle the rotating union unless it is absolutely necessary.
